01 Welcome to Forex Evolution

Forex Evolution is a multi-asset trading platform — crypto, forex, metals, indices and commodities — built around copy-trading, an automated EA, live signals and a full learning suite. It runs your own MetaTrader execution behind the scenes so you trade and mirror strategies from one clean dashboard.

This handbook walks you through everything a member needs: signing in, connecting Telegram, resetting your password, adding a trading account, and using each tool on the platform. Keep it handy.

TIP

In a hurry? The fastest path: 1) sign in, 2) connect Telegram to @AgentEVO, 3) add your trading account, 4) start with the Signal Channel.

02 Getting started — signing in

- 1 Open the platform and enter your email and password.
- 2 If you've set a login passphrase, enter it after your password (this is your second security factor).
- 3 First time in? You'll be sent a one-time link to set your own password, and you'll be asked to create a login passphrase.

Your password is hashed and stored on our server — no one, including staff, can see it. The login passphrase is a separate secret asked at every sign-in for extra protection.

03 Connect Telegram (do this first)

Linking the @AgentEVO Telegram bot unlocks self-service password resets, trade signals, renewal reminders and instant security alerts. It only takes a minute.

- 1 Sign in, then open your Account / Profile and choose Link Telegram.
- 2 Copy your 10-character Connect ID.
- 3 Open the @AgentEVO bot in Telegram and send the Connect ID (or /connect <ID>).
- 4 Approve the link from your dashboard — Signal Channel → Connect Telegram → Approve.

TIP

The dashboard approval step proves it's really you, so a leaked code can never connect a stranger's Telegram to your account.

04 Reset your password or passphrase

For security, password resets happen on Telegram through the @AgentEVO bot. If your Telegram is already linked, it's two steps:

- 1 Open @AgentEVO and send /resetpassword (or /resetpassphrase).
- 2 Tap the secure one-time link it DMs you and set your new details.

Forgot your password and not linked yet?

- 1 On the login page, open the support panel and choose Reset password.
- 2 Verify it's you with your email + login passphrase.
- 3 You'll be shown your Connect ID and exact steps.
- 4 Send that code to @AgentEVO — you're verified, so it links instantly (no approval needed).
- 5 Send /resetpassword and tap the link to set a new password.

IMPORTANT

Reset links expire in 15 minutes and work only once. If you've forgotten BOTH your password and passphrase, contact us on WhatsApp for manual recovery.

05 Add your trading account

- 1 Go to FXEvo Platform → Add account.
- 2 Enter your login (the account number — numeric, not an email), your TRADE password — the master password you place trades with, NOT the broker website login and NOT a read-only investor password — then select your exact broker server.
- 3 Click Connect and wait 30–60 seconds for the status to turn green / Ready before trading or copying.

What the account states mean

- Ready / Connected — live and reporting; safe to trade or copy.
- Connecting — the terminal is starting up; give it a moment.
- Login failed / Invalid account — the broker rejected the login: re-check the exact login number, the TRADE password, and the correct server.
- Bridge not reporting — terminal is up but the data link is catching up; usually self-heals shortly.

TIP

Prop-firm servers (FTMO, FundedNext, Top One Trader, Hola Prime, Goat Funded, etc.) connect once an admin has loaded that broker's server file. Always use the exact server name from your firm's welcome email.

06 The platform at a glance

Everything below lives in the left-hand menu under Trade:

- FXEvo Platform — add accounts and place Buy/Sell orders with stop-loss and take-profit.
- Copy Mirror (on FXEvo Platform) — mirror your master account to your own linked accounts, at the master's lot or a lot you set per account.
- Auto-Trading EA — run an admin-curated strategy on your account and timeframe, with a built-in risk guard; each signal is confirmed before it fires.
- Strategy Tester — backtest a strategy before you risk real money.
- Indicator Library — community and curated indicators to add to your analysis.
- TradingView — full charting and manual market view.
- Signal Channel — live trade ideas you can place on your own account in one tap.
- Forex News — the economic calendar so you trade around high-impact events.
- Journal — your trade history and performance review.
- Risk Management — prop-firm rule guard (daily and max loss limits, presets).
- Trading Course — the Forex Evolution learning curriculum.

07 Trading sessions

The platform focuses on the three major sessions — Asia, London and New York. The London session paired with gold (XAUUSD) is historically the strongest context. Trade with the session, not against it, and check Forex News for high-impact releases first.

08 Membership & billing

Membership runs through Whop with recurring billing. Once your Telegram is linked you get a renewal reminder by DM three days before renewal, plus an in-app banner. Each member can connect up to two trading accounts (support can raise this).

- 1 If a payment fails you keep full access for a 3-day grace period while Whop retries.
- 2 Tap Renew now / Update payment in the banner or your Telegram DM to fix it.
- 3 After the grace period, trading is paused — you can still sign in to renew.
- 4 Renew and your account unlocks automatically the moment payment clears; your journal, accounts and settings are untouched.

IMPORTANT

Your data is kept safe for 30 days while unpaid, then auto-removed — renew before then to keep everything. Paid on Whop but still locked? Wait ~30 seconds and refresh; if it persists, contact WhatsApp support.

09 Troubleshooting

- 'Login failed / Invalid account' — broker rejected the login.
Re-check the login number, the TRADE password and the server.
- Account stuck on 'connecting' — give it a minute; if it persists, remove and re-add it.
- Missing candles over the weekend — expected; markets are closed.
- Didn't get a reset link — make sure your Telegram is linked and your membership is active.

10 Getting help

- Support assistant — the chat on the login page and inside the app answers questions and walks you through any step, any time.
- WhatsApp support — for account-specific help (billing, broker issues, payouts), tap the WhatsApp button. A human will assist you.
